SCHULICH School of Engineering

COURSE OUTLINE
FALL 2026

Approval date	Aug 21, 2026
Approved by	PG
Approver Department	MME

ENME 561 – Mechatronics Design Laboratory I

1. Course Description

A hands-on laboratory experience in the design and analysis of electro-mechanical components. Introduction to microprocessor-controlled electromechanical systems. Laboratory projects to configure, design, and implement a succession of mechatronic systems. Topics of lectures and labs include aliasing, quantization, electronic feedback, power amplifiers, digital logic, encoder interfacing, and motor control.

Prerequisite(s): Mechanical Engineering 461.

Corequisite(s): Electrical Engineering 441 or Mechanical Engineering 585.

Antirequisite(s): Credit for Mechanical Engineering 561 and any of 560, 660 or 661 will not be allowed.

Course Hours: 3 units; H(1-4)

Academic Credits: 3

Calendar Reference: https://calendar.ucalgary.ca/courses/1646681

2. Timetable

Section	Days of the Week	Time	Location
LAB B02	M,F	14:00-15:50	EEEL 103
LAB B03	M,F	16:00-17:50	EEEL 103
LEC 01	F	10:00-10:50	ICT 121
LAB B01	T,R	18:00-19:50	EEEL 103
LAB B04	T,R	16:00-17:50	EEEL 103

3. Course Instructors

Name: Mahdis Bisheban
Section: 01
Email: mahdis.bisheban@ucalgary.ca
Co-instructor Name: Hiranya Udagedara
Section: 01
Email: hiranya.udagedara@ucalgary.ca

Teaching Assistants

Section	First Name	Family Name	Email
01	Adam	Bigsby	adam.bigsby@ucalgary.ca
01	Daniel	Yang	daniel.yang2@ucalgary.ca
01	Maciek	Popik	maciek.popik@ucalgary.ca
01	Nathan	Pangracs	nathan.pangracs@ucalgary.ca

4. Learning Outcomes

Upon successful completion of the course, you will be able to:

1. Develop and analyze mathematical models of electromechanical systems using differential equations, transfer functions, block diagrams to predict system behaviour. (GA2)
2. Conduct experiments to identify electromechanical system parameters, analyze and interpret measured responses, and evaluate the validity and limitations of mathematical models. (GA3)
3. Identify and explain the functions and operating principles of key components used in electromechanical systems, including motors, sensors, amplifiers, converters, and filters. (GA1)
4. Design, integrate, and evaluate a mechatronic system that meets specified functional requirements and engineering constraints. (GA4)
5. Select, configure, operate, and evaluate sensors, motors, data-acquisition devices, and engineering software for mechatronic applications. (GA5)
6. Design, implement, and evaluate controllers for electromechanical systems, and justify controller and implementation choices using stability, transient-response, noise, and hardware constraints. (GA4)
7. Analyze aliasing, noise, converter resolution to determine and justify appropriate sampling rates for computer-controlled electromechanical systems. (GA2)

Graduate attributes

The bracketed references (e.g., **GA 1**) identify the Canadian Engineering Accreditation Board (CEAB) Graduate Attributes that are developed and assessed through each course learning outcome. The Graduate Attributes listed below describe the knowledge, skills, and professional competencies expected of graduates from accredited Canadian engineering programs. Together, they help ensure that engineering graduates are prepared for professional practice.

GA1. A knowledge base for engineering
GA2. Problem Analysis
GA3. Investigation
GA4. Design
GA5. Use of engineering tools
GA6. Individual and team work
GA7. Communication skills
GA8. Professionalism
GA9. Impact of engineering on society/environment
GA10. Ethics and equity
GA11. Economics and project management
GA12. Life-long learning

5. Course Evaluation

Assessment Components

Laboratory reports

Students must submit a laboratory report for each designated laboratory activity. Each submission must include:

- A PDF report containing the required analysis, results, figures, discussion, and answers to assigned questions.
- All required programming and model files, including MATLAB, Simulink, or other specified files.
- Any additional data files identified in the laboratory instructions.

Reports must follow the laboratory-report guidelines posted on D2L. Text, equations, tables, axes, legends, and figure labels must be legible. Students must use a sufficiently large font in both the body of the report and all figures.

Laboratory collaboration

Laboratory experiments will be completed in teams of 2 or 3 students. Laboratory reports will be submitted once per team.

Students may collaborate only with members of their assigned laboratory team while completing team activities. Each submitted report must represent the authorized work of the submitting student or assigned team. Students must not copy text, calculations, figures, data, MATLAB code, Simulink models, or other material from another team, a previous course offering, or an unauthorized source.

All team members are expected to contribute meaningfully to the experimental work, analysis and interpretation of results, programming code, and preparation of the report. Each team will normally receive a common grade and must submit a contribution statement identifying each member's specific contributions. A common grade assumes meaningful participation by every team member. Where documented evidence demonstrates substantially unequal contribution, the instructor may assign different individual grades, subject to applicable course and University policies. Students may confidentially raise concerns about team participation with the instructor.

Authorized materials for laboratory assessments

Students may use:

- Course notes and assigned course materials
- The course textbook
- Laboratory instructions
- MATLAB and Simulink
- Official MATLAB and Simulink documentation
- Support provided by the instructor and teaching assistants
- Additional books, scholarly publications, technical documentation, reputable websites, and other online resources

- Generative artificial intelligence tools only as specified in the course policy below

Students may search the internet to obtain background information, consult technical documentation, troubleshoot software or hardware, and support their learning. Students must critically evaluate information obtained from online sources and remain responsible for the accuracy and quality of all submitted work.

Any external source used in preparing a laboratory report must be appropriately acknowledged or cited. This requirement applies to:

- Ideas, methods, equations, and technical explanations
- Text or paraphrased material
- Figures, tables, and diagrams
- MATLAB or other programming code
- Simulink models
- Data, examples, and design approaches
- Books, articles, documentation, websites, videos, repositories, and AI-generated material, where its use is authorized

Students must not:

- Copy material from another student or team
- Use or adapt reports, code, models, data, or solutions from a previous course offering
- Copy and submit online solutions, in whole or in part, as their own work
- Submit material generated by another person as their own work
- Use unauthorized solution-sharing websites or repositories
- Fabricate, alter, suppress, or misrepresent experimental data
- Provide another student or team with report material, code, models, data, or solutions for unauthorized use
- Use a citation to present copied or minimally modified solutions as original work

Access to an online source does not mean that its content may be copied or submitted. Citing a source acknowledges its use but does not, by itself, make copied work acceptable. Submitted work must demonstrate the team's own analysis, critical thinking, interpretation, and understanding.

Any external material that is authorized and used must be cited in accordance with the laboratory-report guidelines. The use of unauthorized assistance or failure to acknowledge sources may be addressed under the applicable academic-integrity procedures.

Guidelines for Completing and Submitting Coursework

All laboratory reports must be submitted as a single PDF document to the designated D2L Dropbox folder. For example, a five-page report must be combined into one five-page PDF. Reports submitted by email will not be accepted.

All required MATLAB scripts, Simulink models, and other programming files must be submitted as separate files with the corresponding report. Compressed files, including ZIP files, will not be accepted. File names must follow the naming convention specified in the laboratory-report guidelines.

Students are responsible for ensuring that:

- The correct and final versions of all files are submitted.
- Every required file can be opened and is not corrupted.
- The PDF is complete, legible, and submitted to the correct D2L Dropbox folder.
- Submitted programming files correspond to the analysis and results presented in the report.
- The submission is completed before the applicable deadline.

For team reports, one designated team representative must submit the final version of the report and all associated files on behalf of the team. All team members are responsible for reviewing the final submission and confirming its completeness and accuracy. Duplicate submissions by multiple team members should be avoided.
Students must use the laboratory-report template provided through D2L. Marks may be deducted for failure to follow required formatting, submission, or documentation instructions where those requirements form part of the assessment criteria.

Final examination
The final examination is an individual, in-person, two-hour examination. The examination will be scheduled by the Registrar during the Fall 2026 final examination period. The exact date, start time, location, and submission time will appear in the official Final Examination Schedule and the Student Centre when published.
The final examination is **closed book**, with the exception of **one letter-sized, one-sided** reference sheet. The reference sheet may be typed or handwritten and has no content restrictions. No additional pages, attached notes, or electronic copies are permitted.
During the final exam, student cannot not use:

- Textbooks or course notes
- Internet access or internet searches
- MATLAB, Simulink, Excel, or other computational software
- Phones, smartwatches, communication devices, or unauthorized electronic devices
- Generative artificial intelligence or other AI tools
- Communication or consultation with classmates or any other individual
- Material from another student
- Copies or images of examinations from unauthorized sources

Students must not copy, photograph, reproduce, retain, post, transmit, or share examination questions or examination materials except where explicitly authorized.
Students must begin and complete the examination within the official examination period. All examination materials must be submitted before the announced end time.

Final Grade Determination

The final grade in this course will be based on the following components:

Component	Alignment with Learning Outcomes	Weight
6 Lab reports	1 – 7	60%
Final Exam	1 – 7	40%
	Total	100%

Conversion from a score out of 100 to a letter grade will be done using the conversion chart shown below. This grading scale can only be changed during the term if the grades will not be lowered.

Letter Grade	Lower Bound	Upper Bound
A+	96%	
A	92%	96%
A-	88%	92%
B+	84%	88%
B	80%	84%
B-	76%	80%
C+	72%	76%
C	68%	72%
C-	64%	68%
D+	60%	64%
D	50%	60%
F		50%

Note 1: Lab reports are due every two weeks on the following dates: September 17 (Lab 1), October 1 (Lab 2), October 15 (Lab 3), October 29 (Lab 4), November 19 (Lab 5), and December 3 (Lab 6).
Note 2: Lab 2-6 reports reflect group work, while Lab 1 and the final exam assess individual performance.

Final Examination Threshold: To receive a final course grade higher than D, a student must earn at least 40.0% on the final examination. A student who earns less than 40.0% on the final examination will receive no higher than a D as the final course grade, regardless of the calculated weighted course average. This provision does not guarantee a grade of D; a lower grade may be assigned based on the student's calculated overall course grade.

6. Learning Resources

Textbook(s)

Required Textbook:
Title: Feedback Control of Dynamic Systems
Author(s): Gene F. Franklin et al.
Edition: 8th Edition, 2018
Publisher: Pearson Education

Recommended Textbook:
Title: Mechatronics: An Integrated Approach
Author: Clarence W. de Silva
Publisher: CRC Press

Title: Theory and Design for Mechanical Measurements
Authors: Richard S. Figliola and Donald E. Beasley
Edition: 6th edition
Publisher: Wiley

Technology Requirements

MATLAB and Simulink are required for laboratory activities and course assessments. Students can access the required software at no additional cost using their University of Calgary account. Students are responsible for installing or accessing the software and confirming that it functions correctly before the applicable laboratory session or assessment deadline. Instructions for accessing the software will be provided through D2L.

Course Format and Scheduling

Students should regularly check D2L and their University email for course updates, announcements, assessment information, and grades. Students are expected to attend lectures and laboratory sessions at the scheduled times and to take their own notes during lectures. Annotated lecture notes will not normally be posted online.

Expectations for Attendance and Engagement in Sessions

Students are expected to attend and actively participate in all scheduled lectures and laboratory sessions. Attendance will be recorded during laboratory sessions because participation in the experimental work, data collection, and team activities is required to achieve the course learning outcomes. Students must communicate and collaborate professionally and respectfully with classmates, instructors, and teaching assistants at all times. Students who are unable to attend a laboratory session should notify the instructor as soon as reasonably possible and follow the missed-laboratory and accommodation procedures described in this course outline.

Communication

Students must use their @ucalgary.ca email accounts for all course-related email communication. The instructor and teaching assistants will not respond to messages sent from personal email accounts, including Gmail and Hotmail.

The instructional team will normally respond to email within 72 hours, excluding weekends and statutory holidays. Before sending a question, students are encouraged to review the course outline, D2L announcements, laboratory instructions, and other posted course materials.

Students may email the instructor or teaching assistants regarding administrative, scheduling, or other non-technical matters. Technical or course-content questions, including questions about equations, programming code, models, laboratory procedures, and experimental results, will not be addressed by email. Students should bring these questions to scheduled office hours. To request an appointment outside scheduled office hours, students must email the instructor or teaching assistant at least two business days in advance. Appointments are subject to availability.

Laboratory Sessions

Students are expected to attend and actively participate in all scheduled laboratory sessions. Teaching assistants will record attendance because participation in the experimental work, data collection, and team activities is required to achieve the course learning outcomes.

Students who are unable to attend should notify the instructor before the laboratory session whenever reasonably possible. Missed laboratory sessions are subject to the missed-assessment and accommodation procedures described in this course outline.

A team that completes all required experimental activities before the end of the scheduled laboratory period may leave after:

- Showing the completed experimental work to a teaching assistant
- Confirming that all required data have been collected
- Receiving permission from the teaching assistant to leave

Laboratory manuals and supporting materials will be posted on D2L. Food and beverages are not permitted in EEEL 103.

7. Course Policies and Expectations

7.1. Use of AI tools

Transparent Use: AI tools may be used to support your learning and content creation, with appropriate attribution. You may use AI for drafting, problem-solving support, or code assistance, provided that you critically evaluate and revise all outputs. You are responsible for the accuracy and integrity of your submission. All use of AI, including prompts and tool identification, must be clearly documented through an ***AI use statement*** included with your work.

7.2. Use of Calculators in Examinations

You may use any calculator you wish for studying and completing lab reports. However, you must use only one of the following non programmable sanctioned Schulich School of Engineering calculators during exams: Casio FX-260S, Casio FX-300MS, Casio FX-95ES Plus, Casio FX-300ESPLUS2 (2nd Edition), TI-30XIIS, TI-30Xa, Sharp EL-531XTB-WH, and HP10S Plus.

No other calculator models are permitted unless authorized in writing by the instructor before the examination.

Calculator covers and cases must be removed during the examination. Students may not share calculators. Students are responsible for bringing an approved calculator in working condition.

7.3. Reappraisals

For reappraisals of graded term work or academic assessments (including final grades), please refer to the **SSE Reappraisal of Graded Term Work and Academic Assessments Policy**, which is available at:
https://schulich.ucalgary.ca/sites/default/files/teams/1/SSE%20Reappraisal%20Policy.pdf

Reappraisal requests must be based on an alleged grading error and follow the procedures and deadlines specified in the policy. For graded term work, students must first discuss their concerns with the course instructor within 10 business days of receiving or viewing the graded work. Reappraisal outcomes may result in a grade increase, decrease, or no change. Forms are available on the Engineering Student Center D2L site.

7.4. Attendance and Participation Expectations

Students are expected to attend class regularly and to be fully present and engaged in class activities and discussions. If students miss a class session that is included as a component of participation, they must contact the instructor to discuss options to make-up for that component.

7.5. Missed Coursework

Students who are unable to complete an assessment for an acceptable reason must contact the instructor as soon as reasonably possible and follow the applicable University procedures. The instructor may request documentation supporting the absence but will not require any particular type of documentation, consistent with Section M.1 of the Calendar.

Missed laboratory session

Where feasible and safe, a student with an approved absence may be offered one of the following:

- Attendance at another scheduled laboratory section
- A supervised make-up laboratory
- Analysis of instructor-provided experimental data
- An alternative assessment addressing the same learning outcomes

The available arrangement will depend on equipment availability, laboratory safety, staffing, and whether the experimental work can reasonably be reproduced.

Missed laboratory report deadline

Students who anticipate difficulty meeting a laboratory report deadline should contact the instructor as soon as reasonably possible. Where an extension is appropriate, a revised submission deadline will be established. If completing the original report is no longer feasible, an equivalent alternative assessment may be assigned. The alternative assessment will assess substantially the same course learning outcomes.

Laboratory reports submitted within 1 hour of the original deadline will be accepted without penalty. Unless an extension or accommodation has been approved, reports submitted after the grace period will be subject to a penalty of 20% of the total available report grade for each additional 24-hour period, or portion thereof. Reports will not be accepted after three days passed the deadline or after graded reports, solutions, or substantive feedback have been released, whichever occurs first.

Missed final examination

Students who miss the final examination must follow the University's deferred final examination procedures. Approval of a deferred final examination is governed by the applicable University regulations.

7.6. Conduct

Students are expected to demonstrate behaviour in class that promotes and maintains a positive and productive learning environment. This includes treating classmates, instructors, teaching assistants, staff, and external partners with courtesy and professionalism; engaging honestly in all academic activities; contributing constructively to discussions and team-based work; and respecting diverse perspectives.

As members of the University of Calgary community, students are expected to demonstrate conduct that is consistent with the University's Conduct and Non-Academic Misconduct policy and procedures: https://calendar.ucalgary.ca/uofcregs/university-regulations/integrity-conduct

As members of an engineering program, students are also expected to begin developing the professional behaviours and ethical judgment expected of engineers. Throughout this course, students should demonstrate integrity, accountability, respect for others, and a commitment to public safety and responsible engineering practice. Students are encouraged to familiarize themselves with the ethical responsibilities of the engineering profession as described in the Association of Professional Engineers and Geoscientists of Alberta (APEGA) Ethical Practice guideline: https://www.apega.ca/docs/default-source/pdfs/standards-guidelines/ethical-practice.pdf

7.7. Use of Electronic Communication Devices in Class

The use of laptop and mobile devices in class is acceptable when used in a manner appropriate to the course and classroom activities. Please refrain from accessing websites and resources that may

be distracting to you or for other learners during class time. Students are responsible for being aware of the University's Internet and email use policy, which can be found at https://www.ucalgary.ca/legal-services/university-policies-procedures/acceptable-use-electronic-resources-and-information-policy

7.8. Expectations for Writing

All written assignments (including, to a lesser extent, written exam responses) will be assessed at least partly on writing skills. Writing skills include not only surface correctness (grammar, punctuation, sentence structure, etc.) but also general clarity and organization. Sources used in research papers must be properly documented. If you need help with your writing, you may use the **Writing Support** (https://ucalgary.ca/student-services/student-success/writing-support) at the **Chancellor Cuthbertson Student Success Centre** (https://www.ucalgary.ca/student-services/student-success/student-success). For further information, please refer to the official online University of Calgary Calendar, Academic Regulations, E. Course Information, E.2: Writing Across the Curriculum: https://calendar.ucalgary.ca/pages/2c2d1ce47b8c4d008aec9cc3da49876e

8. Guidelines for Recording Sessions

For more information about recording classes in any learning environment see the ***Media Recording of Students in Learning Spaces policy*** here: https://www.ucalgary.ca/provost/teaching-learning/recordings-learning-environments

8.1. Media Recording for Study Purposes

Students who wish to **audio record** lectures for personal study purposes need to follow the guidelines outlined in Section E.6 of the University Calendar: https://calendar.ucalgary.ca/pages/4ba66d5bd43b422ba2e9ab3d6331d5b0

Unless the audio recording of lectures is part of a student accessibility requirement, permission must be sought by the course instructor to audio record lectures.

8.2. Media Recording for Lesson Capture

The instructor may use media recordings to capture the delivery of a lecture. These recordings are intended to be used for lecture capture only and will not be used for any other purpose. Recordings will be posted on D2L for student use and will normally be deleted at the end of term. Students are responsible for turning off their camera and/or microphone if they do not wish to be recorded.

8.3. Media Recording for Assessment of Student Learning

The instructor may use media recordings as part of the assessment of students. This may include but is not limited to classroom discussions, presentations, clinical practice, or skills testing that occur during the course. These recordings will be used for student assessment purposes only and will not be shared or used for any other purpose. The recording will be destroyed as specified by Retention Rule 2000.01 "Examinations and Student Assignments." https://www.ucalgary.ca/provost/teaching-learning/recordings-learning-environments

8.4. Media Recording for Self-Assessment of Teaching Practices

The instructor may use media recordings as a tool for self-assessment of their teaching practices. Although the recording device will be fixed on the instructor, it is possible that student participation in the course may be inadvertently captured. The recording will be destroyed as specified by Retention Rule 90.0011 “Draft Documents & Working Materials."
https://www.ucalgary.ca/provost/teaching-learning/recordings-learning-environments

9. UNIVERSITY OF CALGARY POLICIES AND SUPPORTS

9.1. SSE Advising and Policies

All Schulich School of Engineering students have access to a D2L site titled ***Engineering Student Centre***. Students have the responsibility to familiarize themselves with the policies available on this site.

9.2. Academic Misconduct

Academic Misconduct refers to student behavior which compromises proper assessment of a student’s academic activities and includes cheating; fabrication; falsification; plagiarism; unauthorized assistance; failure to comply with an instructor’s expectations regarding conduct required of students completing academic assessments in their courses; and failure to comply with exam regulations applied by the Registrar.

For information on the University of Calgary Student Academic Misconduct Policy and Procedure and the SSE Academic Misconduct Operating Standard, please visit:
https://schulich.ucalgary.ca/current-students/undergraduate/student-resources/policies-and-procedures

Additional information is available on the Academic Integrity Website at:
https://ucalgary.ca/student-services/student-success/learning/academic-integrity

9.3. Academic Accommodation

It is the student’s responsibility to request academic accommodations according to the University policies and procedures listed below. The Student Accommodations policy is available at:
https://ucalgary.ca/student-services/access/current-students/academic-accommodations

Students needing an accommodation because of a disability, or medical concerns should communicate this need to **Student Accessibility Services (SAS)** in accordance with the ***Procedure for Accommodations for Students with Disabilities*** available at: https://www.ucalgary.ca/legal-services/sites/default/files/teams/1/Policies-Accommodation-for-Students-with-Disabilities-Procedure.pdf. For additional information on support services and accommodations for students with disabilities, visit www.ucalgary.ca/access/

Students needing an accommodation in relation to their coursework or to fulfill requirements for a degree, based on a ***Protected Ground other than Disability***, should communicate this need by

submitting the ***SSE Request for Academic Accommodation Form*** to the Associate Head (Undergraduate Studies) of the department offering the course, within 10 business days prior to the class, test, exam, or assignment at issue.

9.4. Research Ethics

Students are advised that any research with human participants – including any interviewing (even with friends and family), opinion polling, or unobtrusive observation – must have the approval of the **Conjoint Faculties Research Ethics Board** (https://research.ucalgary.ca/conduct-research/ethics-compliance/human-research-ethics/conjoint-faculties-research-ethics-board-cfreb) or the **Conjoint Health Research Ethics Board** (https://research.ucalgary.ca/conduct-research/ethics-compliance/human-research-ethics/conjoint-health-research-ethics-board-chreb)

In completing course requirements, students must not undertake any human subjects research without discussing their plans with the instructor, to determine if ethics approval is required. Some courses will include assignments that involve conducting research with human participants; in these cases, the instructor will have applied for and received ethics approval for the course assignment. The instructor will discuss the ethical requirements for the assignment with the students.

For further information see Section E.5 Ethics of Human Studies of the University Calendar: https://calendar.ucalgary.ca/pages/627ed88eb4b041b7a2e8155effac3501

9.5. Instructor Intellectual Property

Course materials created by instructors (including presentations and posted notes, labs, case studies, assignments and exams) remain the intellectual property of the instructor. These materials may NOT be reproduced, redistributed or copied without the explicit consent of the instructor. The posting of course materials to third party websites such as note-sharing sites without permission is prohibited. Sharing of extracts of course materials with other students enrolled in the course at the same time may be allowed under fair dealing.

9.6. UCalgary Notice of Collection

The University of Calgary (UCalgary) respects your privacy and is committed to ensuring the privacy of all students, staff, and community members. Your personal information is being collected under the authority of section 4(c) of the ***Protection of Privacy Act*** (**POPA**). It will be collected, used and disclosed for the purposes outlined in UCalgary's Notice of Collection, Use and Disclosure of Personal Information (https://www.ucalgary.ca/legal-services/access-information-privacy/ucalgary-notice-collection) and managed in accordance with UCalgary's Privacy Management Program (https://www.ucalgary.ca/legal-services/access-information-privacy/privacy-management-program).

Your personal information may be input into automated systems to generate content or make decisions, recommendations, or predictions.

Assignments can only be returned to the student and will be accessible only to authorized faculty and staff.

If you have questions regarding this notice or UCalgary's collection, use, or disclosure of your personal information, please contact accessandprivacy@ucalgary.ca.

9.7. Copyright Legislation

All students are required to read the University of Calgary policy on Acceptable Use of Material Protected by Copyright, available at https://www.ucalgary.ca/legal-services/university-policies-procedures/acceptable-use-material-protected-copyright-policy, and requirements of the copyright act, available at https://laws-lois.justice.gc.ca/eng/acts/C-42/index.html, to ensure they are aware of the consequences of unauthorized sharing of course materials (including instructor notes, electronic versions of textbooks etc.). Students who use material protected by copyright in violation of this policy may be disciplined under the Non-Academic Misconduct Policy https://www.ucalgary.ca/legal-services/university-policies-procedures/student-non-academic-misconduct-policy.

9.8. Sexual and Gender-Based Violence Policy

The University recognizes that all members of the University Community should be able to learn, work, teach and live in an environment where they are free from harassment, discrimination, and violence. The University of Calgary's sexual violence policy guides us in how we respond to incidents of sexual violence, including supports available to those who have experienced or witnessed sexual violence, or those who are alleged to have committed sexual violence. It provides clear response procedures and timelines, defines complex concepts, and addresses incidents that occur off campus in certain circumstances. Please see the policy available at https://www.ucalgary.ca/legal-services/university-policies-procedures/sexual-and-gender-based-violence-policy

9.9. Additional Support and Resources

For important information on the following student support and resources, please visit the Registrar's website at: https://www.ucalgary.ca/registrar/registration/course-outlines

- Wellness and Mental Health Resources
- Student Success
- Student Ombuds Office
- Student Union (SU) Information
- Graduate Students' Association (GSA) Information
- Emergency Evacuation/Assembly Points
- Safewalk
